Abstract (en)  
A system of armor plates is adapted for protection of a structure against projectiles B and S of two characteristic calibers D B and D S , D B > D S . The system comprises a main armor plate and an auxiliary plate mounted in front of the main armor plate at a distance therefrom. The auxiliary plate comprises a plate made of ballistic material and perforated with through holes of characteristic diameter D,  $1.2D_B > D > 1.2D_S$  , At least one hard-material body of diameter D H is disposed in each of the holes, such that the auxiliary plate provides at least destabilization of impacting projectiles S capable of free passage through an unobstructed hole of diameter D.
