Abstract (en)
[origin: WO2005079581A1] Methods included herein describe the treatment of a tumor by administering dendritic cells either directly into the same or into its surrounding tissue. Further methods describe the induction of immune cell infiltration into tumors and the treatment of tumors with unprimed dendritic cells by administering dendritic cells in a similar fashion. The methods of the present invention are particularly advantageous in the treatment of brain tumors and other solid tumors disposed throughout the body of a mammal that are difficult or impossible to treat by conventional surgical means. Dendritic cell-based compositions effective in the treatment of such tumors are also described.
