Abstract (en)
[origin: WO2005065634A1] An abrasive system for use in high cleaning, controlled abrasivity dentifrice compositions comprises at least one abrasive silica which may be selected from a first silica having a Radioactive Dental Abrasion (RDA) in the range 30 to 150 and a second silica an RDA in the range 100 to 300, and a crystalline aluminosilicate having an average crystallite size below 0.2 µm. The content by weight of the first silica is usually greater than that of the second silica and the RDA of the second silica being greater than that of the first silica.
