Abstract (en)

[origin: WO2005065862A1] The drawing assembly (1) is preferably positioned in intermediate position between a first assembly of straightening members, lying on a substantially horizontal plane, and a second assembly of straightening members, lying on a substantially vertical plane, and comprises a set of drawing wheels (2a, 2b) suitably motorized and a set of contrasting wheels (3a, 3b, 3c), fit to determine between them a curved progress pathway (P) for the metal sections to be fed. One at least of said contrasting wheels (3a, 3b) is fitted rotating on an axis displaced in longitudinal direction to the progress pathway (P) with regard to the vertical lying plane of the axis of an opposing drawing wheel (2a, 2b) it cooperates with, to define said progress pathway (P) for the sections.
