Abstract (en)
[origin: WO2005073059A1] The invention relates to a driver cabin (1) for a utility vehicle, comprising a peripheral roof frame (3), which downwardly defines a driver cabin roof (2), consisting of a front and rear cross beam and two lateral longitudinal beams. Form-giving and domed roof arches (4) are provided on the roof of the driver cabin (2) and are secured to the roof frame (3) with a respective end area (5) thereof. The invention is characterized in that the roof frame (3) is open towards the outside and has recesses (6) which are adapted to the end area (5) of the respective roof arch (4). When in a mounted state, the respective end area (5) of the roof arch (4) is inserted into the recess (6) from outside in order to ensure power transmission.
