Abstract (en)  
[origin: WO2005068301A1] The invention relates to a device comprising a conveyor unit (2) for conveying containers, in particular bottles, in addition to at least one labelling unit (3, 4, 5) for containers, which can be connected to said device. According to the invention, at least the identification data (I) of the labelling unit can be transmitted to the conveyor unit. The invention also relates to a device comprising a labelling unit for labelling containers, in particular bottles, which can be connected to a conveyor unit for conveying said containers, at least the identification data of the labelling unit being transmitted to the conveyor unit. The invention also relates to a corresponding device comprising a conveyor unit and a labelling unit. The invention further relates to a method for connecting a labelling unit for labelling containers, in particular bottles, to a conveyor unit for conveying containers, in which at least the identification data is transmitted from the labelling unit to the conveyor unit.
