Abstract (en)
[origin: WO2005063855A1] The invention relates to formulations comprising a) an amino- and/or ammonium-polysiloxane whose molar ratio between silicon hydroxy- and alkoxy-containing atoms and non-hydroxy- or alkoxy-containing terminal silicon atoms is less than a determined limiting value and at least one other component selected from a group containing b) one or several surface-active agents, c) one or several nitrogen-free polysiloxanes and d) one or several coacervate phase-forming agents. The use of the inventive formulations for treating fibrous materials and a specific method for preparing the a) components are also disclosed
