Abstract (en)  
[origin: WO2005071122A1] The invention relates to a mixing device, in particular for mixing a light metal melt which is provided with a powdery or granulate-type material in the suction channel (1) of a form. The material, in particular a raising agent, is used to form integral foam. The suction channel (1) comprises an inner elevation (4) which is associated with at least one channel in order to inject the material.
