Abstract (en)

[origin: FR2863284A1] The assembly has a high stringer (30) housed partially in a profiled slide (18) between branches of a U-shaped section of the slide. The slide and stringer are assembled in such a manner that they move with respect to one another in a vertical direction. The stringer has two lateral wings (36) mounted slidably between the branches and a housing placed between the wings to receive a material having fire resistance properties. An independent claim is also included for a partition wall for presenting a frame comprising top and bottom rails and vertical pillars connected to the rails.
