Abstract (en)
[origin: EP1553468A1] The watch has two pushbuttons (14, 16) and a setting stem (18) having between them, with respect to centre of clockwork (4), an angular displacement greater than 90 degree. An actuation device has a transmission mechanism (24) extending between the pushbuttons and a control unit (20), where the mechanism is independent to the clockwork such that the pushbuttons and a crown (12) are placed at opposite sides of a case of the watch.
