Abstract (en)

[origin: FR2865298A1] The terminal (100) has a microprocessor (120) containing a sound sequence recognition application. The application controls establishment of a connection between the terminal and a remote sound sequence recognition server (200). The application controls transmission of a sound sequence to the server for identification of the sound sequence by the server, after establishment of the connection. An independent claim is also included for a method of recognizing a sound sequence.
