Abstract (en)

[origin: WO2005071933A1] The invention relates to a method for transmitting information via a telecommunications network. The aim of the invention is to permit a clearer, unambiguous identification of the caller or sender. To achieve this, a logo, which can be individually selected and/or configured in advance, can be selected and automatically sent by the transmitting device via a data or speech transmission channel in parallel with the establishment of a telephone or data connection, said logo being logically linked to an electronic function or a speech or text message.
