Abstract (en)

[origin: WO2005071954A1] Apparatus for supporting an audio/video system, the system including a thin screen video display unit, video components operatively coupled to the display unit for generating video signals displayable by the unit, and audio components for generating audio signals, includes an elevator mechanism for the display unit and an exterior housing. The exterior housing includes a top opening sized to permit upward and downward movement of the display unit through the opening. The video and audio components are fixedly mounted to, the housing. The elevator mechanism extends upwardly within the housing and comprises an elevator platform adapted to carry the display unit between a lower position where the display unit when carried by the platform is retracted into the mechanism and an upper position where the display unit when carried by the platform is deployed above both the elevator mechanism and the exterior housing. In preferred embodiments, the apparatus includes a swivel mounting for supporting the display unit and permitting rotational movement thereof with respect to the platform when the platform is in its upper position.
