Abstract (en)
[origin: EP1707361A2] The roller has an axis and a roller shell, which is rotatable around an axis (12), where the axis is rotatably fixed in the printing plant. A sleeve (40) carries a journal bearing (34) for a barrel band, which is rotatable around one of the two roller journals (20). The angular position of the sleeve is variable on the axis such that the barrel band is adjusted eccentric to the axis. The sleeve released from the axis is adjusted axially.
