Abstract (en)
[origin: EP1707481A1] Onto a surface of a cylindrical core body 1 made of synthetic resin, is adhered a heater unit 2 which is formed by adhering, with an adhesive agent, an electric resistance member 4 made of a SUS foil on an inner surface of a flexible electrically insulating plate 3 made of synthetic resin. The electric resistance member 4 is formed by half-punching the SUS foil uniformly applied on the electrically insulating plate into a given configuration and removing an unnecessary portion. The electric resistance member 4 has a small width, a large length and a zigzag shape to increase electric resistance. Both ends of the electric resistance member constitute connecting portions for an electric power supply wire 5 and are arranged side by side at one end of the electrically insulating plate.
