Abstract (en)  
[origin: EP1707730A2] The device has a flap (1) which is tiltable around an axis (2) from a first position into a second position. A driver (3) is provided for moving the flap around the axis. A bolt device mechanism (4) keeps the flap in the first position. The bolt device mechanism is connected to a release mechanism (5) so that the flap is released for swiveling into the second position.
