Abstract (en)

[origin: EP1707732A1] A roller blind piece (1) has a transmitting room (15) to which a hooking end (3) of an adjoining roller blind piece is clamped such that the roller blind pieces are tiltable. An end (8) of a pin (6) projects into the transmitting room. The pin is adjustable in the longitudinal direction and is thereby separable from the adjoining roller blind piece so as not to interfere in a groove (9) of the hooking end of the adjoining roller blind piece.
