Abstract (en)

[origin: EP1707736A2] The device includes a programmable timer, and/or an infrared or radio signal receiver. The control devices generates and/or transmits a warning signal when it receives a signal from the timer, a radio signal or an infrared signal, and following a time delay, emits a signal to trigger the switching of the circuit to operate the electric drive. The device may include a device for detecting and processing speech commands. An independent claim is included for a method of operating electrically driven equipment.
