Abstract (en)
[origin: EP1708048A1] The watch has tourbillons (SR1, SR2) mounted on a common support and connected to a common display device (A) through a differential display gear (D a). A movement has sub assemblies (SE1, SE2), where each subassembly has one tourbillon. A barrel (B1, B2) and a finishing gear train transmit the energy of the barrel to the tourbillon inside the sub-assembly. The gear (D a) connects the barrel and gear train of each of the sub-assemblies to the display.
