Abstract (en)

[origin: EP1708049A2] The mechanism has a moon disc (2) attached concentrically to a moon display disc (1), where the moon disc is attached such that the moon disc rotates relative to moon display disc during normal activity of the mechanism. The moon display disc is attached such that the moon display disc is in a stationary position during the normal activity of the mechanism, where the stationary position is adjustable by rotational movement.
