Abstract (en)
The movement has a winding setting lever (7) carrying a setting lever screw (12) which defines the axis of rotation of the lever. The lever has a plate formed of two portions (8, 15), where the portion (8) has a stud (10) cooperating with a winding stem (28) mounted on an intermediate bridge (27) to limit the translation movement of the stem. The screw has a cylindrical portion (75) and a free end (42) forming the respective journals disposed on both sides of the plate of the lever. The portion (75) is housed in the bridge and the end (42) is housed in a hole (43) of a main plate (1).
