Abstract (en)

[origin: WO2005072888A1] A transport device is disclosed, in particular, a 3-way transfer for progressive presses (1), in which linear drives (16, 17) are incorporated and operated for horizontal displacement such as to permit a simple exchange of the grab rails on exchange of tools with a compact construction of the linear drives (16, 17). The transport device is characterized in that, in order to carry out the horizontal displacement in the workpiece transport direction, at least two linear drives (16, 17) are provided for each support rail (10).
