Abstract (en)

[origin: WO2005072966A1] The invention relates to printing machines (01) with several printing couples (04), producing at least one printed image (11) on a printed material (03) and a method for the compensation of a longitudinal elongation and/or a transverse elongation of a printed material (03), whereby an anticipated longitudinal elongation and/or transverse elongation of the printed material (03) is compensated by a matching of a printed image placement (09) with regard to the length (L), width (B) and/or position thereof with an imaging system generating the printed image placement (09) on a printing form (08).
