Abstract (en)
[origin: FR2864315A1] The device has a video camera (2) arranged between two superimposed screens (1) and having a lens directed perpendicular to the screens. Electronic boards (4) deal with capture, diffusion, enlargement, cutting, folding, storing and analysis of video images of a customer taken under several exposure angles, by the camera. One of the screen zones detects gestural controls of the customer to trigger the storing/analysis of the images.
