Abstract (en)
[origin: WO2005073935A1] The invention relates to a self service teller system with a more compact and economical construction. A self-service teller system which is extremely space-saving may be achieved by the connection of two self-service teller systems by means of a support housing in an essentially mirror-image arrangement. As only one cash module is used for both self service teller systems the costs of the system can be significantly reduced.
