Abstract (en)

[origin: US7895717B2] A closing mechanism (1; 101; 201; 301) includes a plurality of closing elements (2; 102; 202; 302, 302a) such as hooks, mushroom heads or loops, and a flat carrier (3; 103; 203; 303). The closing elements (2; 102; 202; 302, 302a) protrude from at least one surface (4) of the carrier (3; 103; 203; 303). The closing mechanism (1; 101; 201; 301) has an illuminant (5; 105; 205; 305), at least in certain sections, which emits light when supplied with energy. The invention also relates to an associated production method.
