Abstract (en)
[origin: US2006219145A1] A seat guide device has at least one linear guide system and a seat base supported in a movable fashion on the carriage of said system against the force of a spring. The device further comprises: (a) damping element coupled to at least one of the carriage and the spring, and (b) a block and tackle which includes: (1) one fixed end which is attached to a stationary attachment point; (2) one loose end which is connected to the carriage; and (3) one first loose pulley which is connected to a stationary attachment point via the spring.
