Abstract (en)
The clipper has a motor connected to a cutting guide via an endless screw. The guide is operated by a program stored in a microprocessor to provide manual and automatic modes to a user. A preset hair cutting length is selected by the user through up and down buttons and the guide is displaced towards a desired position, in the manual mode. An average hair cutting length e.g. short length, is selected, the guide is displaced towards a determined height and a zone of a cranium to be treated is displayed, in the automatic mode, where the cutting lengths are symbolized by pictograms.
