Abstract (en)

The method involves arranging the components (51,52,53,54) of different sizes and shapes of a product e.g. roofing set on the packing unit (2) of a packing (1). The packing unit is made of cardboard material. Some of the components are fastened in the packing unit using adhesives, while other components are held in the packing unit by retainers (3,31,32) based on the sizes and geometrical shapes of the components. The components are separated from each other in the packing unit using rectangular partitions which also hold and prevent the components from moving. Independent claims are included for the following: (1) Retainer; and (2) Packing.
