Abstract (en)

[origin: EP1710363A1] The glazed wall has two glass panel profiles (5,9) which are to be fixed on the glass panel (2) and interact with the building profiles (3,7) to be connected to the building. Each building and glass panel profile forms one of two interacting profile pairs (13,14) which when the glass panel is fitted are arranged horizontal one above the other so that the entire weight of the glass panel is supported on the lower profile pair (13). When fitted the front side (18) of the glass panel is free of the profile elements. A fixing and positioning means (19,20) is mounted between the building profile and glass panel profile.
