Abstract (en)

The invention relates to modular cladding for paving, comprising hexagonal sections (2). According to the invention, the long sides of the sections are straight and parallel, while the ends of the four remaining sides are positioned in pairs at an angle of 90°. In addition, a recess (5) is provided at each of the ends of the shorter sides of the section, said recess having similar dimensions to those of a tongue (6) that is disposed on the adjacent side. Moreover, the bodies (2) are sub-divided into two trapezoidal zones by means of a longitudinal rib (4) which is equipped with a longitudinal split line on the sides thereof.
