Abstract (en)

The controller (1) has electrically operated working modules (6) with control valves (6a) arranged successively in linear form. Working modules are connected via linearly running electrical linking string (17) via which control signals for working modules are transmitted. Supply voltage (UB1) is supplied to a connecting module (34) from a base terminal (35), in which connecting module is connected to electrical linking string via electrical feeding connectors (42,42'). A feeding module (38) is included for activating or switching on the linking string.
