Abstract (en)  
[origin: EP1710449A1] The shutter cylinder (20) includes a piston (22) that moves inside a cylinder unit (21), and a mechanically lockable spindle (35) that rotates inside the cylinder unit. Shutter units (42.1,42.2) are used for moving the piston and rotating the spindle in the cylinder unit using the action of a spring (39). Each shutter unit has a pawl mechanism (54) provided for the mechanical blocking the rotation of the spindle with respect to the rotation axis (43) to enable the spindle to rotate in opposing directions.
