Abstract (en)  
[origin: EP1710489A2] The invention relates to a wall light fixture comprising two light sources between which a diffuser-reflector means (3) is introduced in a slanted position, both light sources (1, 2) being focused on it, the diffuser-reflector means (3) having a reflection factor considerably higher than the transmission factor and a low absorption factor. When the first light source (1) is switched on, the light is reflected, achieving a first lighting level sufficient for visual activities. Upon switching on the second light source (2), the lighting level is lower, suitable for surveillance tasks. An emergency battery can be connected to actuate one of the power sources (1, 2) in power outage conditions, or color filters may be arranged so as to achieve aesthetic lighting.
