Abstract (en)
[origin: WO2005072999A1] The invention relates to an active roll stabilization system of a vehicle having an axle with at least two wheels, said axle being provided with a roll stabilizer that is actuated by means of a hydraulic device. Said hydraulic device is impinged upon via at least one pressure control valve with a preselected pressure level by means of a pressure supply device such as a pump. In order to reduce the costs for producing an active roll stabilization system of the aforementioned type, the pressure control valve is pilot-operated by a pressure control pilot valve.
