Abstract (en)

[origin: WO2005075271A1] The invention relates to a piston control system for a scattering device for applying a product to be scattered in order to increase the adherence of a vehicle to a track, especially a rail vehicle, using a piston (6) that can be actuated by a control mechanism. Said control mechanism can be controlled by a potentiometer and/or an elastic force, a pressure cylinder, and a pressure-controlled valve or the like, and the piston stroke and the restoring force acting on the piston can be adjusted.
