Abstract (en)  
[origin: WO2005056953A1] The invention relates to a formwork module (1) for the production particularly of concrete-saving walls. Said formwork module (1) is characterized in that it comprises a first formwork wall (2) which is provided with at least two sections (3, 4) that are derived from the shape of a trapeze. The second section (4) that is configured accordingly is arranged in a continuous manner from at least one end of the first section (3). The inventive formwork module (1) further comprises a second formwork wall (5) which is embodied essentially so as to correspond to the first formwork wall (2). The formwork walls (2, 5) are disposed at a distance from each other such that the base lines (6, 7) of the sections (3, 4) are placed parallel to one another.
