Abstract (en)

[origin: FR2866155A1] The system has two frequency modulation antennae whose aeriels have an original deicing network and four vertical lines (9, 10) that are symmetrical with respect to a vertical plane of a vehicle. An amplitude modulation antenna has a conductor line placed above or below a vehicle rear window. Frequency modulation signals are collected at points (12, 13) to acquire a directive signal along the length and width directions of the vehicle.
