Abstract (en)
[origin: WO2005071800A1] The invention relates to an electric connecting plug (1) comprising a plug member (2) provided with an internal contact (3) and at least one external contact radially remote from said internal contact (3) with respect to the longitudinal axis of the member (2). The plug member (2) is received by a housing element which is applied by the internal part thereof on the contact side to the external part of the external contact in such a way that the external contact of the connecting plug (1) is radially inwardly pressed against the external contact of a bush by the axial displacement of the plug member (2) with respect to said housing element. In order to ease of handling said connecting plug (1), said invention is characterised in that the plug member (2) is axially movably mounted in the housing element which is provided with a lever (10) pivotally mounted thereon and effects the plug member (2) in such a way that it is displaceable with respect to said plug element (2) by actuating the lever (10).
