Abstract (en)
[origin: EP1712693A1] The wall for a building structure, especially a non-load bearing inner wall (1), is composed of a number of butting plywood timbers (3) forming flat frames (5). The frames are covered by planks (7). The timbers have grooves (15) along their longitudinal sides (13), at right angles to the frame planes. Bonding units (21,31,37) grip into the grooves, with a width matching the groove width, to adjust and align the butting timbers across the frame planes.
