Abstract (en)

[origin: EP1712698A2] Both layers of hot-melt adhesive (7, 8) lie locally across the lining direction (E) and contact the polypropylene sheet water-barrier layer (2) over the entire length of the lining. There is a second fleece layer (14) on the opposite side to the first fleece layer (1). The adhesive layers (7, 8), have regions (11, 13; 10, 12) lying against the fleece layers (1, 14) and directly against the sheet layer (2). The regions (11, 13; 10, 12) make watertight bonds with each other.
