Abstract (en)  
A casing profile (i) is provided for boxing-in building structures such as pipework, radiators, electrical cables and the like or for use in the manufacture of furniture. The profile (i) comprises a board (2) with an angled cross-section. At least one joint (5) of the profile (i) has been formed by the wrapping the board (2) around dowelling (6). To this end, the board (2) has a channel (9) formed in one side (8) thereof in which the dowelling (6) is located and is adhered to the board (2). The bottom (10) of the channel (9) is formed by a flexible thickness of the board (2) that has been folded around the dowelling (6). Hence, the other side (7) of the board (2) opposite the channel (9) defines an unbroken curving surface.
