Abstract (en)

[origin: EP1712712A1] The handle has a gripping device (1) presented in the form of a handle and fixed on a post (2) of a sliding door to move the sliding door between an open position and a closing position. A movement amplification mechanism (7) is housed in the gripping device and is activated by an actuator (3) for controlling the locking and unlocking of the door. The mechanism (7), actuator and a unit blocking the locking of the door are disposed directly against the post.
