Abstract (en)

Electronic device (1) for managing the exhaust of burnt gases, particularly in a boiler comprising an exhaust duct for burnt gases and ventilation devices (3) together with said exhaust duct for the ejection of the gases. The device (1) originally comprises a processing unit (2) functionally connected to the ventilation devices (3) in order to manage their operation and a pressure sensor (4) for detecting an exhaust pressure of the burnt gases. The sensor (4) is feedback-connected to the processing unit (2). Method for managing the exhaust of burnt gases, particularly in a boiler.
