Abstract (en)

[origin: EP1712974A1] The device has a rotary knob adjustable in different angular positions and axially movable between rotation angle adjusting and retracting positions. A body is guided into a guide way on an outer surface of an inner axial body (6). The body is a radial inwardly projecting lug at the end of an axially aligned arm (16), which is implemented single-piece with an outer axial body (5) and movable lateral flexibly from its rest position.
