Abstract (en)

[origin: EP1713108A2] The arrangement has a key with a key cap (2), which forms circular edge region that lies on a surface of a movable key part. A key face plate (4) encompasses the key cap. The distances between side surfaces of the key cap and side surfaces of the face plate are smaller with non-actuated key than with actuated key. Six guiding units (11) are formed on side walls of the cap and at edge regions of the face plate.
