Abstract (en)
[origin: WO2005077609A1] The invention relates to a functional element (1) which is fastened to an article of daily use and which comprises a fastening surface for fastening it to the article of daily use and a functional surface for transmitting a pressure or shearing force between a finger of the hand of a user and the article of daily use. The functional element also comprises a sign support (3) which on the one face configures the fastening surface and on the other face is provided with visible signs (2). The face of the sign support (3) carrying the visible signs (2) borders on a transparent soft synthetic body (5) through the free surface of which configuring the functional surface the visible sign (2) is visible.
