Abstract (en)

[origin: WO2005077681A1] The invention concerns a device for monitoring a motor vehicle tyre pressure, said device comprising at least one control apparatus (6) and/or at least one central box (10), which are connected by conduits of wheel speed sensors and control conduits (5) or still by conduits of wheel speed sensors (11) and by steering conduits (13) to transceivers (4) mounted in the wheel passage zones. Said transceivers are used for wireless transmission of the information in one or two directions and energy transmission with a transponder (1) arranged in a wheel or tyre proximate the wheel passage.
