Abstract (en)

[origin: WO2005061649A1] A resilient compound for use in forming a seal, particularly a seal for use in food manufacturing/processing plants. The sealing compound includes a detectable material dispersed therethrough, such as barium sulfate. A seal can be made in whole or in part from the resilient compound. The detectable material is preferably of a type, which can be detected by x-rays, metal detection or other detection means.
