Abstract (en)

[origin: WO2005047627A1] The invention relates to a door handle clamping fixture (8) essentially comprising an insertion piece (7) that can be inserted into an insertion hole (3) of a door handle neck (2) and is provided with a locking spring (10). Said locking spring (10) is part of the insertion piece (7) and can be rested against a locking toothing (9) of a handle pin (4) which can be inserted into the insertion piece (7). The invention is characterized in that at least one longitudinal groove (12) for accommodating a chamber guide (13, 14) that is disposed on the insertion piece (7) as well as at least one longitudinal groove (12) for accommodating a locking spring (10) are arranged along a portion of the length of the insertion hole (3) while a longitudinal section (b) of the insertion piece (7) engages into a grooveless section of the insertion hole (3). Moreover, the door handle clamping fixtures (8) of opposite door handles (1) are configured in a mirror-inverted manner.
